quest_1_4_1 [c:\users\halos\downloads\uuu\quest_1_4_1.py](#)

Importing necessary libraries and modules

Modules

[datetime](#) [json](#) [tkinter.messagebox](#) [ttkbootstrap](#)

Classes

[builtins.object](#)

[QuestController](#)

[QuestModel](#)

[QuestView](#)

class **QuestController**([builtins.object](#))

Controller class to manage quests

Methods defined here:

__init__(self)

Initialize self. See help(type(self)) for accurate signature.

add_quest(self, quest)

delete_quest(self, index)

edit_quest(self, index, title, description, priority, category, due_date)

get_requests(self)

is_duplicate_priority(self, priority, exclude_index=None)

load_requests(self, filename='quests.json')

mark_complete(self, index)

save_requests(self, filename='quests.json')

sort_requests(self)

Data descriptors defined here:

__dict__

dictionary for instance variables

__weakref__

list of weak references to the object

class **QuestModel**([builtins.object](#))

[QuestModel](#)(title, description, due_date=None, priority=1, complete=False, category='General')

Model class representing a single quest

Methods defined here:

__init__(self, title, description, due_date=None, priority=1, complete=False, category='General')
Initialize self. See help(type(self)) for accurate signature.

__str__(self)
Return str(self).

to_dict(self)

Static methods defined here:

from_dict(data)

Data descriptors defined here:

__dict__
dictionary for instance variables

__weakref__
list of weak references to the object

class **QuestView**([builtins.object](#))

[QuestView](#)(root, controller)

View class to handle the graphical user interface

Methods defined here:

__init__(self, root, controller)
Initialize self. See help(type(self)) for accurate signature.

cancel_add_quest(self)
Method to cancel the addition of a quest and clear the form fields

cancel_edit_quest(self)
Method to cancel quest editing and reset the form

delete_quest(self)
Method to delete a selected quest

load_quests(self)
Method to load quests from a JSON file

mark_complete(self)
Method to toggle a quest's completion status

refresh_quests(self)
Method to refresh the Treeview with updated quests

save_quests(self)
Method to save all quests to a JSON file

show_add_quest_fields(self)
More methods are defined below to handle actions like adding, editing, completing, deleting, and saving quests.
Method to display the form fields for adding a new quest

show_edit_quest_fields(self)
Method to display the form fields for editing a quest

show_message(self, message, style)
Method to show feedback messages

submit_add_quest(self)
Method to handle the submission of a new quest

submit_edit_quest(self)
Method to handle the submission of edited quest data

Data descriptors defined here:

__dict__
dictionary for instance variables

__weakref__
list of weak references to the object

Functions

is_valid_date(date_str)
Function to validate date format

is_valid_priority(priority)
Function to validate priority (must be greater than or equal to 1)
